                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-09-150-864A-6

// Sequence 6, Application US/09150864A

// Sequence 6, Application US/09150864A

// Patent No. 6355779

// GENERAL INFORMATION:

// APPLICANT: Alderson, Mark R.

// APPLICANT: Alderson, Mark R.

// APPLICANT: Smith, Craig A.

// TITLE OF INVENTION: Cytokine Designated 4-1BB Ligand and Human Receptor

// TITLE OF INVENTION: That Binds Thereto

// TITLE OF INVENTION: That Binds Thereto

// FILE REFERENCE: 2801-B

// CURRENT APPLICATION NUMBER: US/09/150,864A

// CURRENT FILING DATE: 1998-09-10

// PRIOR APPLICATION NUMBER: 08/060,843

// RIOR FILING DATE: 1993-05-07

// NUMBER OF SEQ ID NOS: 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .

Sequence 2, Application PC/TUS9603965

GENERAL INFORMATION:

APPLICANT: Kwon, Byoung Se

APPLICANT: Kang, Chang-Yuil

TITLE OF INVENTION: Monoclonal antibody against human

TITLE OF INVENTION: receptor 4-1BB

NUMBER OF SEQUENCES: 10

CORRESPONDENCE ADDRESS:

ADDRESSEE: Barnard, Brown & Michaels

STREET: 306 East State Street, Suite 220

S-08-816-605-9
Sequence 9, Application US/08816605
Patent No. 5874240
GENERAL INFORMATION:
APPLICANT: Ni, Jian
APPLICANT: Yu, Guo-Liang
APPLICANT: Gentz, Reiner
TITLE OF INVENTION: Human 4-IBB Receptor Splicing Variant
NUMBER OF SEQUENCES: 9
CORRESPONDENCE ADDRESS:
ADDRESSEE: Human Genome Sciences, Inc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score 47; DB 1; Length 255;

Patent No. 5874240

GENERAL INFORMATION:

APPLICANT: Ni, Jian

APPLICANT: Yu, Guo-Liang

APPLICANT: Gentz, Reiner

TITLE OF INVENTION: Human 4-IBB Receptor Splicing Variant

NUMBER OF SEQUENCES: 9

CORRESPONDENCE ADDRESS:

ADDRESSEE: Human Genome Sciences, Inc.

STREET: 9410 Key West Avenue

CITY: Rockville

STATE: MD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 219;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 8, Application US/08236918A

Sequence 7, Application US/09512363
Sequence 7, Application US/09512363
Patent No. 6503184
GENERAL INFORMATION:
APPLICANT: Ni, Jian
APPLICANT: Ruben, Steven M.
TITLE OF INVENTION: Human Tumor Necrosis Factor Receptor-Like Proteins
TITLE OF INVENTION: TR11, TR11SV1, and TR11SV2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

protamine - fruit fly (Drosophila melanogaster)
C;Species: Drosophila melanogaster
C;Date: 07-May-1995 #sequence_revision 03-Aug-1995 #text_change 24-Sep-1998
C;Accession: S52157
C;Accession: S52157
C;Accession: Data Library, November 1994
A;Description: Drosophila melanogaster mst35B genes encode very similar protamine like mc A;Reference number: S52155
A;Accession: S52157
A;Status: preliminary
A;Molecule type: DNA
A;Residues: 1-110 <RUS>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       probable exported protein STY2079 [imported] - Salmonella enterica subsp. enterica serovar C; Species: Salmonella enterica subsp. enterica serovar Typhi A;Note: this species has also been called Salmonella typhi C;Date: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 18-Nov-2002 C; Accession: A50740 C; Accession: A50740 R; Parkhill, J; Dougan, G.; James, K.D.; Thomson, N.R.; Pickard, D.; Wain, J.; Churcher, t., T.; Connerton, P.; Cronin, A.; Davis, P.; Davies, R.M.; Dowd, L.; White, N.; Farrar, S.; O'Gaora, P. hypothetical protein all1686 [imported] - Nostoc sp. (strain PCC 7120)

C, Species: Nostoc sp. PCC 7120

A; Note: Nostoc sp. PCC 7120

A; Note: Nostoc sp. strain PCC 7120 is a synonym of Anabaena sp. strain PCC 7120

C; Date: 14-Dec-2001 #sequence_revision 14-Dec-2001 #text_change 24-Nov-2003

C; Accession: AH2016

R; Kaneko, T.; Nakamura, Y.; Wolk, C.P.; Kuritz, T.; Sasamoto, S.; Watanabe, A.; Iriguchi, N; Shimpo, S.; Sugimoto, M.; Takazawa, M.; Yamada, M.; Yasuda, M.; Tabata, S. DNA Res. 8, 205-213, 2001

A; Title: Complete Genomic Sequence of the Filamentous Nitrogen-fixing Cyanobacterium Anal A; Reference number: AB1807; MUID:21595285; PMID:11759840

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 32
T14206
NADH2 dehydrogenase (ubiquinone) (EC 1.6.5.3) chain 2 - Tanganicodus irsacae mitochondri
C;Species: mitochondrion Tanganicodus irsacae
C;Date: 20-Sep-1999 #semianca variation
C;Date: 20-Sep-1999 #sequence_revision 20-Sep-1999 #text_change 03-Jun-2002
C;Accession: T14034

"Characterization of a homolog of human bone morphogenetic protein 1 in the embryo of the sea urchin, Strongylocentrotus purpuratus.";
Development 120:559-568(1994).
-! TISSUE SPECIFICITY: Ectodermal and primary mesenchym cells in hatched blastula.
-! DEVELOPMENTAL STAGE: Embryo; highest level before spiculogenesis.
-! SIMILARITY: Belongs to peptidase family M12A.
-! SIMILARITY: Contains 1 EGF-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CUB 1.

"Genome sequence of a human tumorigenic poxvirus: prediction of
specific host response-evasion genes.";
science 273:813-816(1996).

"C. -! - FUNCTION: ESSENTIAL FOR VIRAL REPLICATION. PLAYS AN IMPORTANT ROLE
DURING TRANSCRIPTION OF EARLY MRNAS, PRESUMABLY BY PREVENTING R-
LOOP FORMATION BEHIND THE ELONGATING RNA POLYMERASE. ACTS AS NTP-
DEPENDENT HELICASE THAT CATALYZES UNIDIRECTIONAL UNWINDING OF
3.TAILED DUPLEX RNAS. MIGHT ALSO PLAY A ROLE IN THE EXPORT OF
NEWLY SYNTHESIZED MRNA CHAINS OUT OF THE CORE INTO THE CYTOPLASM.

REQUIRED FOR PROPAGATION OF VIRAL PARTICLES (BY SIMILARITY).

C. -! - CATALYTIC ACTIVITY: NTP + H(2) 0 = NDP + phosphate.

C. -! - SIMILARITY: Belongs to the DEAD box helicase family. DEAH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This SWISS-PROT entry is copyright. Detected in embryonic brain and epithelium, and at lower levels in adult heart, lung and liver. In neonatal mice, mainly in hair follicles and neuron-like cells in the cerebellum, but not in the skin epidermis. Isoform 3 was found in embryonic day 17.5 skin but not in brain and liver. SIMILARITY: Contains 3 TNFR-Cys repeats.
                             receptor
